COMPACT POWER

NEW and IMPROVED

The Boxer 500 Series has recently been redesigned to provide even greater productivity on the jobsite. The updated Boxer packs more punch including increased operating and tip capacities; offers a wider wheelbase for improved stability, better sight lines for operator visibility, longer reach and increased dump height for loading and unloading materials and more ground speed to reduce cycle times. The operator station has also been simplified to help reduce operator fatigue and promote ease of operation.

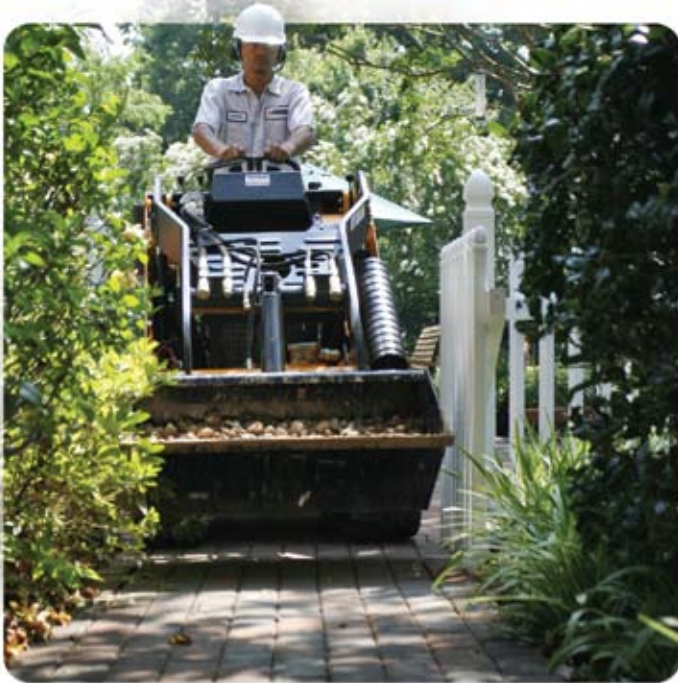

BOTTOM-LINE PRODUCTIVITY

1,050 lbs (476 kg)! That is the operating capacity of the new 526DX diesel model, more than any other mini-skid/compact utility loader available on the market today and the first mini-skid in the world with a tip capacity of over a ton. The Boxer 526DX is powered by a 26.1 hp (19.5 kW) Perkins liquid-cooled diesel engine. The 500 Series is also available as an unleaded gas model, the 530X, that offers an operating capacity of 825 lbs (374 kg). The 530X is powered by a Kohler Air Cooled 30 hp (22.4 kW) engine.

The 500 Series machines are Tier III compliant and come equipped with a two-pump, 3000 psi (207 Bar) hydraulic operating system that develops 14.5 gpm (54.88 L/min) of hydraulic flow to run the machine's auxiliary and travel systems. Combined, the engines and hydraulic systems give the Boxer 500 Series the muscle to handle full size attachments like a 36" (91.4 cm) auger or 48" (121.9 cm) trencher. Bottom line, the Boxer 500 Series offers the power needed to get a wide range of jobs done quickly and more cost-effectively.

HOW DO YOU FIT a 43.5" MACHINE THROUGH a 36" GATE?

The answer is easy. The Boxer 500 Series mini-skids are the only machines on the market to offer an integrated track-widening system. The variable track offers a fully extended width of 43.5" (110.5 cm) and a retracted width of 35" (87.6 cm). A lever on the control panel allows the operator to vary the track width of the machine to maneuver through tight areas, such as gates and sidewalks, then extend to full width while in operation for increased stability. Visit our website at www.boxerequipment.com to see how it works.

SAFE and EASY OPERATION

Unlike skid steers, Boxer mini-skids provide 360-degree visibility of the work area for increased operator safety. The cushioned ride of the stand-on operator platform provides the highest level of comfort and visibility. The wheelbase has also been increased to 37" (94 cm) to provide increased safety and stability. The Boxer's ergonomically designed control panel, familiar skid steer-style operation and quick attach system enable the user to quickly and easily switch attachments for optimum productivity and bottom-line performance. The Boxer also features a hydraulic flow control system that can be implemented when using an attachment that requires high engagement speed and slower travel, such as a trencher.

WIDE RANGE of ATTACHMENTS

Over 50 attachments are available for a wide range of industries and applications. Some of the more popular attachments include: Trenchers, Standard Buckets, 4-in-1 Buckets, Auger Power Heads and Bits, Adjustable Forks, Carry-All/Levelers, Angling Blades, Landscape Power Rakes, Tillers, Rotary Brooms, Concrete Breakers, Mulch Buckets, Tree Forks, Backhoes, Grapple Forks, Snow Blowers, Turf Cutters, Sod Layers, Rubble Buckets and many more.

Please see our attachment brochure, visit our website at www.boxerequipment.com or call your local authorized dealer for a complete list of attachments and availability.

Trailer shown above is a ProHauler D612RTSD

SYSTEM TRAILER

The 500 Series is also available as a package with a ProHauler system trailer, designed and equipped to accommodate the Boxer and a package of standard attachments. Great for a contractor in the field, the busy rental store or as a starter package for someone purchasing their first mini-skid system. The 500 Series' system trailers are available in 5' x 10' (152.4 x 304.8 cm) or 6' x 12' (182.9 x 365.8 cm) sizes and are easily towable with a 3/4-ton (680.4 kg) pick-up truck. The trailer is equipped with storage receptacles for each attachment, comes standard with chains and binders to keep the attachments in place while in transit and includes either a 2" (5.1 cm) coupler or 2-5/16" (5.9 cm) coupler for towing.

The trailer has built-in receptacles for a 44" (111.8 cm) bucket, leveler that doubles as a carryall, 36" x 6" (91.4 x 15.2 cm) trencher, auger power head with 9" (22.9 cm), 15" (38.1 cm), 18" (45.7 cm) and 30" (76.2 cm) auger bits, adjustable lifting forks, a tiller and a multi-purpose tool that includes a scarifier.

COMPACT POWER

ABOUT the COMPANY

Compact Power, Inc. is a world leader in the compact hydraulic power equipment market and specializes in products that are up to 50 hp (37.3 kW) and 5,000 lbs (2268 kg). The company created the North American market for the Compact Utility Loader over ten years ago. Compact Power Utility Loaders are sold to a wide range of industries and major rental accounts. Since then, Compact Power, Inc. has introduced machines that operate smoother, go faster, lift more and create more hydraulic power. They are the manufacturers of a wide range of compact equipment including Boxer Mini-Skids and Compact Power Attachments.

For a more complete list of attachments and availability, please visit www.boxerequipment.com or call your local, authorized dealer. The company is now expanding into global markets.
